IC - A61K9/06 ; A61K33/10
FS - CPI
DC - D21 E33
AB - J61109725 Ointment contains 3-15 (w/w)% of aragonite type calcium carbonate.
- Typical ointment comprises Zn oxide (fine powder) 20g, pure lanolin 11g, bleached beeswax 4g, white vaseline 62g, aragonite type Ca carbonate 3g. The aragonite type Ca carbonate may originate from aragonite, geyserite and coral. Pref. the aragonite type Ca carbonate is pulverised as finely as possible to eliminate the rough feeling to the skin and to make it easily soluble.
- USE/ADVANTAGE - The ointment prevents dermatitis such as decubitus and prickly heat and is useful for early treatment. (3pp Dwg.No.0/0)
